Case Studies in Epilepsy Surgery

February 9-11, 2009

Silvertree Hotel and Snowmass Conference Center
Snowmass Village, Colorado

This unique epilepsy symposium features a format centered on didactic presentations followed by informal case discussions. Faculty from several well established epilepsy centers will present cases illustrating points made earlier during the didactic sessions.

Target Audience:

Neurologists, neurosurgeons, and other healthcare professionals entrusted with the care of those with epilepsy.

Learning Objectives:

1. Review different types of epileptic substrates causing medically intractable temporal lobe epilepsy.
2. Review surgical techniques to treat temporal lobe epilepsy.
3. Discuss the challenges in diagnosing and surgically treating extratemporal lobe epilepsy.
4. Define surgically remediable pediatric catastrophic epilepsy and the underlying pathogenesis and treatment for each.
5. Review the anatomy and surgical technique of anatomic versus disconnective hemispherectomy.
6. Participate in case discussions regarding temporal lobe epilepsy, extratemporal epilepsy, and pediatric epilepsy syndromes.
