Peristomal Cancer… a first look

CHIU SAKAI-IMOTO, BSN RN CWOCN
CLEVELAND CLINIC, CLEVELAND, OHIO

Objective

- Differentiate peristomal skin cancer from other peristomal skin problems.
- Describe the management plan for peristomal skin cancer.

Case 1

- 48 years old, male
- Medical history of Crohn’s disease
- Permanent ileostomy since 1989.
- Started to develop skin lesion 1 year ago.
- Has been receiving treatment for pyoderma gangrenosum in other medical provider.
At First Look (May 2013)

Is this really pyoderma?

Pyoderma

What is it?

Is this pseudoverrucous?

Pseudoverrucous

What is it?
Case 5  (February 2014)

Choice of pouching system

- Adapting objectives of managing malignant cutaneous wounds. (Goldberg, M.T. and Bryant R.A., 2011)
  - Pain control
  - Prevent trauma from pouch removal
  - Control or prevent bleeding
  - Managing periwound/peristomal skin
  - Control odor
  - Collect and contain exudate

Peristomal/stomal Carcinoma

- It is not common case
- It is difficult to diagnose
- Biopsy confirms the diagnosis and will suggest the plan of care. It is critical to have suspicious areas biopsied early.
