Join us on November 20-21 for a program that will cover the management of common cardiovascular conditions. Health care providers can rely on this program for critical updates and recommendations for incorporating them into your practice.

ATTENDEES WILL LEARN HOW TO:

• Discuss trends in transcatheter valve devices, electrophysiology, coronary bypass surgery, and imaging technologies.

• Describe advances in coronary revascularization for chronic CAD and percutaneous coronary intervention for chronic total occlusion.

• Summarize the clinical impact of developments in management of advanced heart disease, including new drugs and devices, mechanical circulatory support, and extracorporeal membrane oxygenation.

• Incorporate key elements of health care reform into cardiovascular practices.

• Critically evaluate and adapt developments in contemporary management of thoracic aortic disease.

• Describe advanced practices for the management of thoracic and aortic valve disease, including endovascular treatments.

• Summarize important developments in management strategies for atrial fibrillation.

WHO SHOULD ATTEND?

This conference is intended for physicians providing adult primary care, cardiologists, cardiovascular surgeons and other health care professionals, including nurse practitioners and physician assistants, who care for patients with cardiovascular disease.
