About the Course
Urologic neoplasms represent the model for multidisciplinary management. With the rapid increase in our understanding of tumor biology and its extension into the clinic, there is an ever expanding therapeutic armamentarium available to manage patients with prostate cancer.

This one-day course is designed to provide a topical, clinically-based overview of many of the current therapy dilemmas faced by clinicians managing prostate cancer, with an emphasis on the opportunities for multidisciplinary management.

Urologists, medical oncologists, radiation oncologists, pathologists, nurses, physician assistants, and other health care providers with an interest in the management of patients with urologic malignancies should attend this course.

Following participation in this course the participant will be able to:
• Discuss the emerging data supporting the role of adjuvant/salvage radiotherapy in the management of locally advanced prostate cancer.
• Integrate evolving knowledge of active surveillance in the management of men with low-risk prostate cancer.
• Integrate evolving molecular genomics in the management of men with prostate cancer.
• Recognize the importance of the multimodality treatment approaches of men with prostate cancer.
• Utilize evolving therapeutic options in patients with advanced prostate cancer.

Accreditation
The Cleveland Clinic Foundation Center for Continuing Education is accredited by the Accreditation Council for Continuing Medical Education (ACCME) to provide continuing medical education for physicians.
